

Science Test Study Cards—Chapter 1 (2)

<p>What do you call a group of plants or animals that can reproduce with each other? Dogs are in one of these groups. Cats are in another.</p>	<p>Species</p> 
<p>The dinosaurs have something in common with the lizards we see today. What do they each have 4 of?</p>	<p>Legs</p> 
<p>Which group of animals lay eggs? Mammals or reptiles?</p>	<p>Reptiles</p> 
<p>Which has a backbone—vertebrates or invertebrates?</p>	<p>Vertebrates</p>  <p>--Backbone</p>
<p>A fern is a vascular plant with no</p> 	<p>seeds</p> 

Science Test Study Cards—Chapter 1 (2)

<p>A Pacific Tree Frog is born from an egg and has sticky pads but no</p>	<p>Scales</p> 
<p>What do plants make for themselves that fungi do not?</p>	<p>Their own food</p> 
<p>Do plants AND animals have many, many cells?</p>	<p>Yes</p> 
<p>Which is true of Protists and Archaeobacteria?</p> <ol style="list-style-type: none">1. They are plants.2. They are animals.3. They are neither plant nor animals.	<p>3. They are neither plants nor animals.</p>
<p>A conifer is a type of tree but they do not have one thing most other trees have. What is it?</p>	<p>Leaves</p> 

Science Test Study Cards—Chapter 1 (2)

<p>Is a lobster an arthropod or a mollusk?</p>	<p>an arthropod</p> 
<p>What do you call an animal with no backbone, a soft body and a hard outer shell?</p>	<p>a mollusk</p> 
<p>Yeast is used in baking bread. What does the carbon dioxide in yeast cause the bread to do?</p>	<p>Rise</p> 
<p>What makes amphibians different from other animals with backbones?</p>	<p>The babies look nothing like the adults.</p> 
<p>Which 2 characteristics do most mammals share?</p>	<p>They are warm blooded and the mothers make milk for their young</p> <p style="text-align: center;">warm-blooded ANIMALS</p>  <p style="text-align: center;">Body temperature stays the same when its cold or hot outside.</p>
<p>Do the protists living inside animals help or hurt them?</p>	<p>Protists are helpful to the animals they live in. They help the animal digest its food.</p>
